PROFESSIONAL SUMMARY

Aspiring Software Engineer with a strong foundation in C++ Data Structures & Algorithms and hands-on exposure to full-stack development. Passionate about engineering scalable software solutions, applying problem-solving skills to real-world challenges, and building secure web infrastructure. Experienced in deploying data-driven applications and actively engaged in national-level hackathons. Seeking an internship to contribute technical expertise within a high-impact, collaborative engineering environment.

EDUCATION

Lloyd Institute of Management & Technology

Bachelor of Computer Applications (BCA)

Expected Graduation: August 2028

- **Relevant Coursework:** Data Structures & Algorithms, Object-Oriented Programming, Database Management Systems, Operating Systems, Computer Networks, Software Engineering.
 - Active participant in hackathons and ideathons.
-

TECHNICAL SKILLS

- **Languages:** C++, Java, Python, C, HTML, CSS, JavaScript, node.js.
 - **Core Fundamentals:** Data Structures & Algorithms (C++), Object-Oriented Programming (OOP), Full Stack Development.
 - **Tools & Frameworks:** Git, GitHub, Streamlit, VS Code.
-

PROJECTS

Bank Management System

Tech Stack: Python, Streamlit

- Developed and deployed a Bank Management System using Streamlit.
- Designed an intuitive interface for banking operations.
- Implemented modular code for better scalability and maintainability.
- Applied object-oriented programming concepts and file handling to manage banking records efficiently.
- Successfully deployed the application online.

Live Demo

<https://bank-management-system-cjcw9yfzs7qzerhy3yg7lf.streamlit.app/>

Data Analysis of DC Motard Showroom

Tech Stack: Python, Pandas, NumPy, Matplotlib

- Performed exploratory data analysis on showroom data.
- Cleaned and transformed raw datasets for analysis.
- Identified sales trends and generated meaningful business insights.
- Presented findings through visualizations to support data-driven decision-making.

ACHIEVEMENTS

Hacksynergy National Hackathon | *Participant & WAF Developer*

- Successfully competed in Hacksynergy, a 24-hour national-level hackathon organized by E-Cell IPEC.
- Architected and developed a functional Web Application Firewall (WAF) to detect and mitigate web vulnerabilities under a strict 24-hour time constraint.
- Demonstrated rapid prototyping, technical creativity, and stamina in building innovative security solutions.

Ideathon 2025 | *Top 20 Teams (Lloyd Institute of Management & Technology)*

- Proposed and architected a technology-driven Data Privacy Awareness solution, advancing to the third round of the competition.
 - Conceptualized a privacy-focused mobile application layer designed to grant users granular control over their data permissions.
-
